

Contributing to the Fight Against NTDs

- With medications available for as little as \$0.50 per person per year, it takes very little to make a big difference.
- Compared to treatment costs for malaria and HIV, the rapid impact package is pocket change.
- On average, you could provide NTD treatment to a village for the year for only \$500 and support an entire district for only \$250,000.
- Treating for NTDs has a rapid impact on the health, productivity and school performance of a community.
- Given the numerous collateral benefits, both on the individual and community level, treating NTDs is unquestionably the best buy in public health.

A Look at the Top Ten Priority Countries

Country	Population in millions	Population at Risk in millions	Cost: 1 year in millions of USD	Cost: 5 years in millions of USD	Understanding the Numbers
Mozambique	20.9	15.68	\$7.84	\$39.19	<ul style="list-style-type: none"> • The population numbers are taken from the most recent CIA World Fact Book. • It has been determined that in most NTD endemic countries 75% of the population is at risk, assuming that about 40% of Sub-Saharan populations are children (World Fact Book) and that adults are also at risk. • The costs are based on the Rapid Impact Package which costs \$0.50 per person per year.
DR Congo	65.8	49.35	\$24.68	\$123.38	
Zambia	11.5	8.63	\$4.31	\$21.56	
Malawi	13.6	10.20	\$5.10	\$25.50	
Tanzania	39.4	29.55	\$14.78	\$73.88	
Benin	8.1	6.08	\$3.04	\$15.19	
Angola	12.3	9.23	\$4.61	\$23.06	
Sierra Leone	6.1	4.58	\$2.29	\$11.44	
Cameroon	18.19	13.58	\$6.79	\$33.94	
Guinea	9.9	7.43	\$3.71	\$18.56	
Kenya	36.9	27.68	\$13.84	\$69.19	
TOTAL	242.69	181.95	\$90.98	\$454.88
